lives in cold seas.  
Length: 4-5.5m

(Dolphins and whales aren't  
different in terms of  
biological classification  
A cetacean less than ten  
meters is called a dolphin and  
one of superior length  
a whale)

IT'S A  
BELUGA.

WHAT'S  
THAT  
BEAST  
?

A beluga is also called a white whale, and Shiralumi literally means white sea.

# BUBBLING

The beluga can produce bubble rings by protruding its flexible mouth like a clown.

(This art was first created in an aquarium in Shimane Prefecture.)

Awes-  
some !!

The bubbling  
is a pretty  
sophisticated  
and popular skill.

I'M SO SORRY !!
